

Innovative Technology Solutions for Public Housing Administration

About Us

ReFrame Fund Accounting is a web-based, cloud-hosted application whose user interface screens and business logic layer are developed using open source Java technology and are easily customizable as per business requirements. Simple SaaS pricing provides complete GL functionality integrated with the ReFrame Assist product suite. Leveraging eWorksheets, our in-house-developed business reporting tool, all custom reports and third-party documents such as purchase orders and invoices can be sent/printed out of the application. Modules include Financial Accounting & Reporting, Procurement, Inventory, Customer Relationship, and Human Capital.

ReFrame Difference

Implementing Public Housing Accounting demands knowledge on industry standard business processes across verticals, compliance, and statutory reporting requirements along with thorough underlying technology. Any gaps in mapping the business requirements in the system could lead to great losses in terms of resources and time. Some of our service & solution differentiators are:

single system

Leveraging our decade long consulting experience, we will advise you on standard processes and controls

Gap analysis - be it in reporting or business process mapping - is addressed by our bolt-on tools or in-house

All custom reports & documents such as PO & invoices can be printed out of ReFrame

Business partner rules, contact management

luman Resource

Recruitment, Personal Administration Pavroll. Attendance & Leave, Personal Development, Travel Management, Employee Self Service Training

ReFrame vs Other Accounting Packages

Features	ReFrame	Other Accounting Packages
Access Controls	Complex, role-based access control can be implemented. Administrator and technical staff's access to sensitive data can be restricted	User-based access controls. Administrator & technical staff access cannot be restricted
Data Integrity – Deletion of Transactions	Transactions can only be reversed & not deleted; therefore maintaining the transaction trail & history	Without leaving a trace, transactions can be deleted from the application
Module/ Business Process Coverage	All processes including Finance, Procurement, Inventory, Costing, CRM and Human Capital management can be mapped on ReFrame-making it a unified platform for all the enterprise functions	Modules are siloed, resulting in the replication of information across the system, which can result in data inconsistency and duplication of effort
Restrictions based on Period or Financial Year	The system facilitates implementing restrictions based on past period so that no back-dated transactions can be entered by users	Restrictions based on past period are very basic in nature and past-dated transactions can be entered easily
Cost Of Ownership	Affordable SaaS pricing	Upfront license fee along with annual maintenance support fee
Customization	Highly configurable and reduces the need for customization	Customization/ enhancement are possible by selected partners
Integration with TPAS	Provides standard APIs to integrate with any third-party tools	Flat-file based manual integration can be built using proprietary code

ReFrame Advantage

Flexible and scalable fully functional accounting solution, which grows as per the organization's need

Affordable SaaS pricing means lower TCO

Highly configurable to customize menus, windows and tabs

Integrates with ReFrame Assist for A/P, A/R and Fixed Assets
